IMPROVING THE STATE
OF THE WORLD

Shaping the Future of Health & Healthcare

**Dr. Susanne Andreae, Head of Health & Healthcare Industry
World Economic Forum**

Our Mission: Ensure every person on earth has equal access to the highest standards of health and healthcare

Our Theory of Change:

In the next decade, healthcare delivery systems will transform radically. Our current capital intensive, hospital-centric model is unsustainable and ineffective. The Future of Health and Healthcare leverages a data-enabled delivery system and virtual care, integrated across the continuum of care from precision prevention to personalized care delivery, with most health services offered in appropriate settings.

Our Approach:

- Encouraging new models of collaboration/partnership
- Raising awareness, building a shared understanding and driving collective action

Keeping Populations Healthy

Delivering the Best Care

Aging and Longevity: Key implications

- By 2020, more people over 65 than under 5
- Dementia: 7th leading cause of death
Cases could triple to 152 million by 2050
- COVID-19: disproportionately affecting vulnerable people
Increased challenge of isolation, poor mental health
- Technology as key enabler for access and quality of care

**Ensure a healthy life expectancy and
years spent in good health free of disability**

Key initiatives of the World Economic Forum

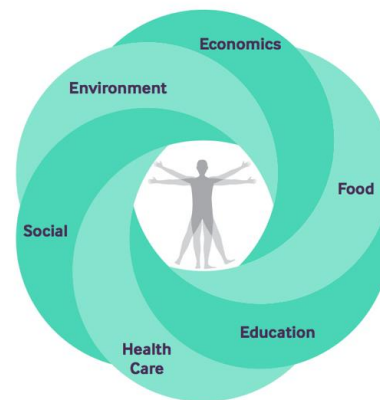

Davos Alzheimer's Collaborative

Accelerating the transformative power of innovation

Social Determinants of Health

Addressing the social factors driving poor health outcomes

Global Future Council on Longevity

Interdisciplinary knowledge network promoting innovative thinking
